

1 **ABSTRACT OF THE DISCLOSURE**

2 A double trigger electric stapler includes a body, a stapling mechanism
3 and a control circuit device. The body has a front and a stapling recess defined in
4 the front. The stapling mechanism and the control circuit device are respectively
5 mounted in the body. The control circuit device connects electrically to the
6 stapling mechanism and has a switch to control stapling. The switch can be a
7 photoelectric switch and has a U-shaped trigger mounted transversally in the
8 stapling recess. Therefore, a person can push pieces of paper into the stapling
9 recess to touch the trigger to staple without any limitation regarding orientation.
10 Using the electric stapler is convenient for both right-handed and left-handed
11 people.
